CyberPatriot Ubuntu 24.04 README

Please read the entire README thoroughly before modifying anything on this computer.

UNIQUE IDENTIFIER

If you have not yet entered a valid Unique Identifier, please do so immediately by double clicking on the "CyberPatriot Set Unique Identifier" icon on the desktop. If you do not enter a valid Unique Identifier this VM may stop functioning after a short period of time.

FORENSICS QUESTIONS

If there are "Forensics Questions" on your Desktop, you will receive points for answering these questions correctly. Valid (scored) "Forensics Questions" will only be located directly on your Desktop. Please read all "Forensics Questions" thoroughly before modifying this computer, as you may change something that prevents you from answering the question correctly.

COMPETITION SCENARIO

You work for Adams, Ferguson, & Associates (AFA), a major DC law firm that specializes in corporate law. Recently, jpearson stepped down as managing partner and has been replaced by rzane2. As part of rzane2's new vision for the firm, he has asked your team to audit the status of our DMZ web and mail servers.

AFA's security policies require that all user accounts be password protected. Employees are required to choose secure passwords, however this policy may not be currently enforced on this computer. The presence of any non-work related media files and "hacking tools" on any computers is strictly prohibited. This company currently does not use any centralized maintenance or polling tools to manage their IT equipment. This computer is for official business use only by authorized users. Your job is to secure this computer, within the guidelines of the scenario, while ensuring the availability of authorized business critical software and services.

UBUNTU 24.04

It is company policy to use only Ubuntu 24.04 on this computer. It is also company policy to use only the latest, official, stable Ubuntu 24.04 packages available for required software and services on this computer. The display manager should remain set to GDM3.

Management has decided that the default web browser for all users on this computer should be the latest stable version of Google Chrome. The only company approved firewall for this computer is UFW. Company policy is to never let users log in as root. If administrators need to run commands as root, they are required to use the "sudo" command.

UFW is currently enabled, however the webserver is not currently accessible externally as a recent SOC scan identified a malicious PHP reverse shell. Please use UFW to allow in port 80 connections to the webserver after you have removed the reverse shell.

This server hosts the AFA's wiki website where our lawyers have compiled a comprehensive knowledge base. The website is a DokuWiki instance served by a LEMP (Nginx, MySQL, and PHP) stack. The website should be accessible locally at "http://localhost". You DO NOT need to configure and enable HTTPS at this time.

The SOC team has requested that you enable logging for the Nginx web server. All access and error logs should be stored in the default location. You do NOT need to configure any PHP or MySQL settings at this time.

Critical Services:

- Nginx Web Server (nginx)
- MySQL Database Server (mysql)

AUTHORIZED ADMINISTRATORS AND USERS

Authorized Administrators:
benjamin (you)
password: W1llH4ck4B4con!
rzane2
password: zane
hspecter
password: L1f3!5LikeTH1s
llitt
password: ugotlittup
mross
password: Ross999

Authorized Users:
awilliams
swheeler
kbennett
pporter
baltman
rzane
scarter
dpaulson
gbodinski

COMPETITION GUIDELINES

- In order to provide a better competition experience, you are **NOT** required to change the password of the primary, auto-login, user account. Changing the password of a user that is set to automatically log in may lock you out of your computer.
- Authorized administrator passwords were correct the last time you did a password audit, but are not guaranteed to be currently accurate.
- Do not stop or disable the CCS Client service or process.
- Do not remove any authorized users or their home directories.
- The time zone of this image is set to UTC. Please do not change the time zone, date, or time on this image.

- You can view your current scoring report by double-clicking the "CyberPatriot Scoring Report" desktop icon.
- JavaScript is required for some error messages that appear on the "CyberPatriot Scoring Report." To ensure that you only receive correct error messages, please do not disable JavaScript.
- Some security settings may prevent the Stop Scoring application from running. If this happens, the safest way to stop scoring is to suspend the virtual machine. You should **NOT** power on the VM again before deleting.

The CyberPatriot Competition System is the property of the Air & Space Forces Association and the University of Texas at San Antonio.
